

To understand how we bring incredible medical advances like CyberKnife technology to life.

 just fold A to B.

Not only did we develop the CyberKnife for the treatment of brain tumors, we're leading the way in expanding its uses to treat tumors elsewhere on the body. For people like Mark McLarin, the CyberKnife is providing an amazing alternative to traditional surgery. Using concentrated beams of radiation, this non-surgical outpatient procedure can be performed in 30 minutes. And there is no recovery time, whereas conventional surgery requires days or weeks of recovery. But this is just one of many examples of how bringing incredible medical advances to life is helping people live better. Learn more at StanfordHospital.com.
